

Responding to public health issues in the era of globalization

Avian flu, Chikungunya, asbestos, pollution, obesity ... For the citizen, the business leader, and the political decision-maker, public health questions are essential but remain complex. **Today's society is in need of professionals who are capable of understanding all aspects of these questions.**

To respond to this need, **the Institut Pasteur** and **the Cnam** have pooled their expertise to create the Pasteur/Cnam School of Public Health. Courses offered by the Cnam (biostatistics, economics, health law, analysis of the politics of health, non-infectious health risks) are complemented by instruction

from the Institut Pasteur (epidemiology, infectious health risks), which together constitute an educational experience of the highest caliber - and one that is solidly anchored in the professional world.

The highest quality of instruction is provided by a team of professionals under the direction of **Jean de Kervasdoué**, chair of the Department of Economics and Management of Health Care Systems at the Cnam, and **Arnaud Fontanet**, director of the Unit on the Epidemiology of Emerging Diseases at the Institut Pasteur. The **scientific board** of the Pasteur/Cnam School of Public Health watches over the curriculum to ensure the inclusion of the latest innovations in the field.
